Windows7 Tip

If you run a lot of programs at the same time, your desktop can get extremely cluttered. This can get annoying if you're working on one program and want to minimize all the other windows

In Windows 7 there is a "shake" feature, which allows you to minimize every window except the one in which you're currently working -- in a single step. Click and hold the title bar of the window you want to keep on the desktop; while still holding the title bar, shake it quickly back and forth until all of the other windows minimize to the taskbar. Then let go. To make them return, shake the title bar again.

You can do the same thing by pressing the Window key-Home key combination -- although doing that is not nearly as much fun.
